5. **DS code + SMR code**

6. **reclamation**

Verification Challenges

1. unbounded shared heap

2. unbounded data domain

3. unbounded number of threads

4. fine-grained concurrency

GC-techniques do not work (well)!

In particular: ownership reasoning

Automated Verification for GC

- Vafeiadis, CAV'10 + VMCAI'10
- Abdulla et al., TACAS'13
- Zhu et al., CAV'15
- Abdulla et al., SAS'16 + ESOP'18

$(non\text{-}blocking\ data\ structure)^2$

Verification Challenges

1. unbounded shared heap

2. unbounded data domain

3. unbounded number of threads

4. fine-grained concurrency

GC

> **Automated Verification for GC**
> - Vafeiadis, CAV'10 + VMCAI'10
> - Abdulla et al., TACAS'13
> - Zhu et al., CAV'15
> - Abdulla et al., SAS'16 + ESOP'18

5. **DS code + SMR code**

> **(non-blocking data structure)^2**

6. **reclamation**

> **GC-techniques do not work (well)!**
>
> In particular: ownership reasoning

Our Approach

?

Data structure + **SMR impl** $\models$ **Property**
